

ROYAL FROST BIRCH

Betula szechuanica 'Royal Frost'

Height: 30-35' **Spread:** 20'

Location: Zone 4, sun to part shade, heat tolerant

Shape: Broad, upright, slightly pendulous.

Foliage: Burgundy all season

Notes: 'Royal Frost' is considered by many to be an upgrade from 'Crimson Frost' birch. Actually a cross between 'Whitespire' and 'Crimson Frost.' Its burgundy-red spring and summer foliage and white bark combine to produce a beautiful landscape focal point. Graceful habit and somewhat pendulous habit. Best grown in normal garden soil in full sun.
